

VIDEO: GAM Linear Mount Products

Click  to watch video

Connecting a motor or gear reducer to a linear product sounds pretty straight forward; however, with all of the design and machining involved, it can be a challenging and time-consuming task. GAM's **Linear Mount Products** were developed to solve those issues so you can focus time on other parts of your machine.

PMK Parallel Mount Kit

Design to mount a motor parallel to a ball screw, reducing the overall length of the system. With 4 sizes and customized mounting plate, mount almost any servo motor to any linear ball screw actuator

Distance Couplings

Connect linear actuators with a common drive with drive shaft (also know as line shaft) couplings that can span lengths up to 20-ft without additional intermediate bearings

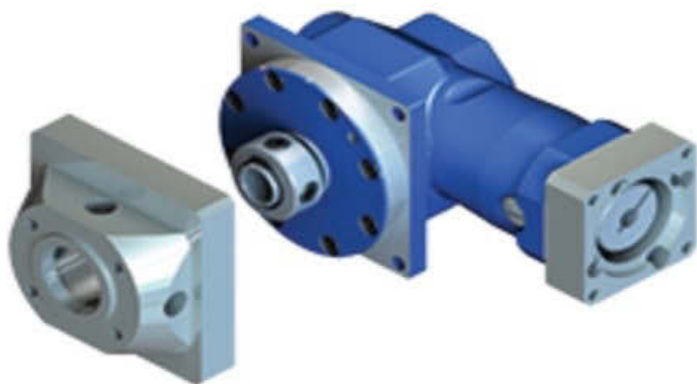

EPL-H & EPR-H

Inline planetary and right angle planetary servo gearboxes with hollow output for compact, direct connection to linear products, no couplings required

www.festo.com

DL-DC Hypoid

High performance right angle hypoid gearbox with a hollow output for compact, direct connection to linear products, no couplings required

Bevel Gearboxes

Highly configurable, economical right angle solution, available in frame sizes 27 to 350 mm
